

Which Scenario Am I In?

Kiosk Deployment Router (One Page)

Last updated: 2025-12-23

1. 1) Lifecycle stage
 - Event is live now -> Scenario F (Live Event Support)
 - Event finished / returning / warranty -> Scenario G (Post-Event / After-Sales)
 - Preparing for deployment -> continue
2. 2) Unit condition
 - Brand new from supplier/factory -> Scenario A (Brand New)
 - From storage and boots normally -> Scenario B (From Storage)
 - Does not boot / unstable -> Scenario C (Failed Unit)
3. 3) Content mode
 - Stable internet -> Scenario D (Online URL)
 - Internet unreliable -> Scenario E (Offline Localhost)

Most common combinations (write this in your notes):

Hardware state / Content	Online	Offline
New	A + D	A + E
From storage	B + D	B + E
Failed (after rebuild)	C + D	C + E
